

Opportunity Title: Hydropower Engineering Fellow
Opportunity Reference Code: DOE-EERE-STP-WPTO-2021-1503

Organization U.S. Department of Energy (DOE)
Reference Code DOE-EERE-STP-WPTO-2021-1503
How to Apply Click on *Apply* below to start your application.

ORISE is continuing normal program operations during the COVID-19 pandemic. This opportunity will be offered as long as the Department of Energy Headquarters is able to complete the onboarding process and ensure a meaningful experience to participants. We encourage you to apply and submit your application as soon as possible. Updates to this opportunity will be provided on this page as needed.

Connect with ORISE...on the GO! Download the new ORISE GO mobile app in the [Apple App Store](#) or [Google Play Store](#) to help you stay engaged, connected, and informed during your ORISE experience and beyond!

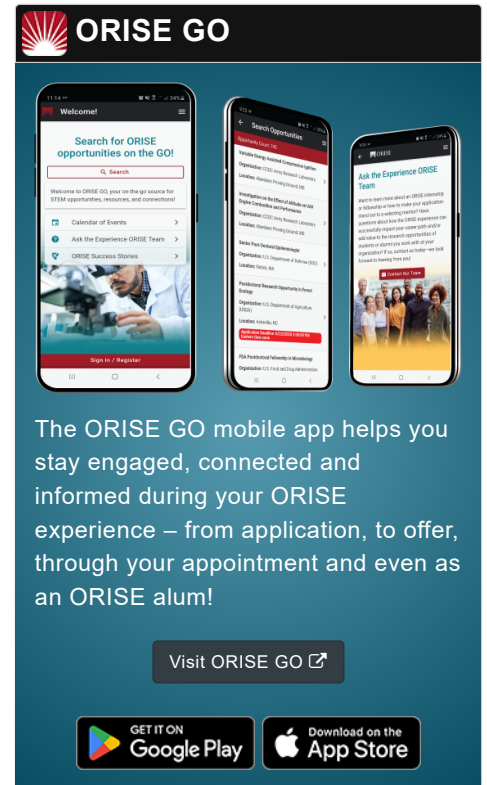

If you have questions, please send an email to DOE-RPP@orise.ornl.gov.

Application Deadline 4/30/2021 5:00:00 PM Eastern Time Zone

Description The US Department of Energy (DOE), Energy Efficiency and Renewable Energy (EERE) Science, Technology and Policy (STP) Program serves as a next step in the educational and professional development of scientists and engineers by providing opportunities to participate in policy-related projects at DOE's Office of Energy Efficiency and Renewable Energy in Washington, D.C. Participants will become part of a group of highly-trained scientists and engineers with the education, background, and experience to be part of the workforce that supports the DOE's mission in the future.

The US power system is changing rapidly, including increasing amounts of renewable energy such as wind and solar. Energy resources that are capable of balancing the variability of wind and solar are increasingly at a premium, from batteries and other chemical storage technologies to hydropower and pumped storage. The existing pumped storage hydropower (PSH) fleet, for example, comprises 550 GWh of storage and 22 GW of capacity, making it by far the largest source of energy storage in the US. Conventional reservoir hydropower, in addition to serving as a source of clean and low-cost energy generation, can also be operated flexibly to balance variable renewables and enable integration of additional wind and solar onto the grid. The changing power system creates opportunities for hydropower and PSH (as well as other resources) to provide new value and support the transition to a 100% clean energy future.

You will pursue these opportunities by applying your technical

The ORISE GO mobile app helps you stay engaged, connected and informed during your ORISE experience – from application, to offer, through your appointment and even as an ORISE alum!

Opportunity Title: Hydropower Engineering Fellow

Opportunity Reference Code: DOE-EERE-STP-WPTO-2021-1503

knowledge to various projects and ongoing efforts in the office. As a full member of the team, you will both learn and contribute across the range of activities associated with managing applied research. The office is also highly receptive to new ideas that fellows may have regarding research topics and strategies. Former fellows have frequently progressed to higher-level and more permanent positions at DOE and elsewhere.

You will learn how to:

- Provide technical insight and support for research projects in a range of topics focused on quantifying the value of hydropower to the power system, mapping plant capabilities and associated constraints, optimizing hydropower operations, and developing new technologies to enable increased flexibility.
- Participate as part of a dynamic team to understand challenges and opportunities associated with the changing power system.
- Interact with DOE National Labs and industry partners who lead many HydroWIREs research projects.
- Interact with utilities, technology developers, ISOs, environmental groups, regulators, and international partners to understand perspectives of the hydropower and broader power system communities.
- Serving as a technical reviewer for funding opportunities.
- Participate in and collaborate on conferences relating to hydropower, energy storage, and/or renewable energy.
- Co-author publications such as white papers, government reports, stakeholder outreach materials, or peer-reviewed journal articles related to hydropower.
- Collaboratively participate with the broader office on areas of hydropower environmental outcomes, fleet modernization, low-impact hydropower development, and marine energy technologies.

You will collaborate on the office's HydroWIREs Initiative, whose mission is to understand and support hydropower's role in a 100% clean energy future. The HydroWIREs Initiative, as the office's \$15M grid integration program, includes research in four broad areas: understanding value drivers for hydropower under evolving system and market conditions; describing flexible capabilities and associated tradeoffs associated with hydropower meeting system requirements; optimizing hydropower operations and resource planning; and developing innovative technologies that enable hydropower to operate more flexibly. HydroWIREs efforts include power/water system modeling, valuation and technoeconomic analysis, innovative technology R&D, convening stakeholders, and international collaboration.

Past and present fellows have commented that Water Power Technologies Office (WPTO) provides a supportive mentorship environment and a positive office culture. WPTO highly

values fellows and encourages them to proactively pursue their interests within our range of work. We would be happy to arrange for you to speak with our numerous current and previous participants to get a further sense of our office culture and the opportunities this placement could provide.

Fellow Benefits

Selected fellows will receive a stipend as support for their living and other expenses during this appointment. Stipend rates are determined by EERE officials and are based on the candidate's academic and professional background. Relocation expenses, not to exceed \$5,000, incurred in relocating from the participant's current address to Washington, D.C. (if more than 50 miles from the address shown on the application), may be reimbursed. Participants will receive a travel allowance of \$10,000 per appointment year to cover travel-related expenses to scientific and professional development activities.

This opportunity is available to U.S. citizens and Lawful Permanent Residents. (LPR).

Appointment Location

Washington, DC

Nature of Appointment

You will not enter into an employee/employer relationship with ORISE, ORAU, DOE, or any other office or agency. Instead, you will be affiliated with ORISE for the administration of the appointment through the ORISE letter of appointment and Terms of Appointment.

Qualifications

Program eligibility requirements can be found at: visit

<https://www.energy.gov/eere/education/energy-efficiency-and-renewable-energy-science-technology-and-policy-program>.

Preferred Qualifications:

- Mechanical or electrical engineering experience specific to energy generation and storage resources, including component- or system-level design of hydropower plants, renewable energy integration, or power system operations.
- Experience with on-the-ground design, development, or operation of energy projects, and in particular hydropower (including pumped storage hydropower), is preferred.
- Experience with complex energy project development is a

plus, e.g., related to supporting pumped storage hydropower demonstration and deployment, relicensing existing hydropower projects for increased flexibility, adding batteries to existing hydropower to create hybrid configurations, or exploring use cases for hydropower and storage in remote communities.

- Experience working with a utility, power producer, NGO, or other industry entity on practical applications, either in a research or industry context, is a plus.
- Capability to identify innovative technology gaps and operational strategies that can increase new pumped storage hydropower deployment and enable increased hydropower flexibility from the existing fleet.
- Capability to provide industry or other external perspective to help DOE research have real-world impact.
- Ability to learn new things and welcome intellectual challenges.
- Ability to work on a dynamic, supportive team.
- Ability to clearly communicate complex, technical ideas to colleagues and management.

How to Apply:

A complete application consists of:

- An application
- Transcript(s) - For this opportunity, an unofficial transcript or copy of the student academic records printed by the applicant or by academic advisors from internal institution systems may be submitted. Selected candidate may be required to provide proof of completion of the degree before the appointment can start.
- A current resume/curriculum vitae (CV)
- 2 Letters of Recommendations

The resume/CV must include the following:

- Basic applicant Information: Name, address, phone, email, and other contact information.
- Work & Research Experience: List all work and research experiences beginning with current or most recent. Include the name of the employer, location, position held, and time period involved.
- Leadership Experience: List experiences (e.g., work, civic, volunteer, research) that demonstrate your leadership skills. Detail your role, type of experience, organization, location, and duration.
- Educational History: List all institutions from which you received or expect to receive a degree, beginning with current or most recent institution. Include the name of the academic institution, degree awarded or expected, date of awarded or expected degree, and academic discipline.
- Honors & Awards: List in chronological order (most recent
