Description The NETL Postgraduate Research Program (PGRP), managed by the Oak Ridge Institute for Science and Education, is a high-intensity program designed to not only identify recent master's and doctoral graduates of high promise, but to continue developing advanced research skills within those graduates. It allows the postgraduate researcher to systematically outline career goals and helps provide the means of achieving these goals. One way the program helps to achieve these goals is the critical interaction with NETL principal investigators, who become the postgraduate's mentor. This interaction affords the postgraduate researcher a unique opportunity to define and structure his or her investigations, to establish a research paradigm, and to publish results-- all critical skills needed to become an independent scientist or engineer.
