

Opportunity Title: A Next Generation Quick Fire Emissions Dataset (QFED) **Opportunity Reference Code:** 0310-NPP-JUL25-GSFC-EarthSci

Organization National Aeronautics and Space Administration (NASA)

Reference Code 0310-NPP-JUL25-GSFC-EarthSci

How to Apply All applications must be submitted in Zintellect

Please visit the NASA Postdoctoral Program website for application instructions and requirements: <u>How to Apply | NASA Postdoctoral Program</u> (orau.org)

A complete application to the NASA Postdoctoral Program includes:

- 1. Research proposal
- 2. Three letters of recommendation
- 3. Official doctoral transcript documents

Application Deadline 7/1/2025 6:00:59 PM Eastern Time Zone

Description About the NASA Postdoctoral Program

The <u>NASA Postdoctoral Program (NPP)</u> offers unique research opportunities to highly-talented U.S. and non-U.S. scientists to engage in ongoing NASA research projects at a NASA Center, NASA Headquarters, or at a NASA-affiliated research institute. These one- to three-year fellowships are competitive and are designed to advance NASA's missions in space science, Earth science, aeronautics, space operations, exploration systems, and astrobiology.

Description:

Biomass burning is an important source of aerosols and trace gases to the atmosphere and is a major element of the terrestrial carbon cycle. NASA's Goddard Earth Observing System Model (GEOS) utilizes the Quick Fire Emissions Dataset (QFED) to represent emissions from vegetation fires in order to model direct and indirect effects of biomass burning aerosols, homogeneous and heterogeneous chemistry in the atmosphere, and to perform credible Earth system analysis, and climate and air pollution studies. The QFED emissions are based on the fire radiative power (topdown) approach with the location and fire radiative power obtained from the Moderate Resolution Imaging Spectroradiometer (MODIS) fire products.

Recent updates to QFED include integration of fire products from new sensors (VIIRS), and a new multispectral approach for retrieving fire radiative power (FRP) for two phases of burning: flaming and smoldering. This project will focus on utilizing these fire products in a global atmospheric data assimilation framework.

Activities that would be involved in this project include (but are not limited to):

• Develop machine learning algorithms that utilize fire products from

Whether you are just starting your career or already at a senior level, ORAU offers internships, fellowships, research opportunities, and contract positions that can provide you with invaluable experience. Download the ORAU Pathfinder mobile app and find the right opportunity to propel you along your career path!

Opportunity Title: A Next Generation Quick Fire Emissions Dataset (QFED) **Opportunity Reference Code:** 0310-NPP-JUL25-GSFC-EarthSci

geostationary satellites to better represent fire evolution and variability

- Develop machine learning emulators to represent forward operators for fire observations for atmospheric data assimilation
- Implement ensemble methods in the fire emissions estimation and estimate uncertainties
- Utilize bi-phasic FRP retrievals for dynamic calculation of fire emissions composition, and representation of plume rise

Field of Science: Earth Science

Advisors:

Patricia Castellanos patricia.castellanos@nasa.gov (301) 614-6574

Arlindo da Silva arlindo.m.dasilva@nasa.gov (301) 614-6174 Applications with citizens from Designated Countries will not be

accepted at this time, unless they are Legal Permanent Residents of the United States. A complete list of Designated Countries can be found

at: https://www.nasa.gov/oiir/export-control.

Eligibility is currently open to:

- U.S. Citizens;
- U.S. Lawful Permanent Residents (LPR);
- Foreign Nationals eligible for an Exchange Visitor J-1 visa status; and,
- Applicants for LPR, asylees, or refugees in the U.S. at the time of application with 1) a valid EAD card and 2) I-485 or I-589 forms in pending status
