

Opportunity Title: Photonic devices for quantum sensors
Opportunity Reference Code: 0274-NPP-MAR26-JPL-TechDev

Organization National Aeronautics and Space Administration (NASA)

Reference Code 0274-NPP-MAR26-JPL-TechDev

How to Apply All applications must be submitted in [Zintellect](#)

Please visit the NASA Postdoctoral Program website for application instructions and requirements: [How to Apply | NASA Postdoctoral Program \(oua.org\)](#).

A complete application to the NASA Postdoctoral Program includes:

1. Research proposal
2. Three letters of recommendation
3. Official doctoral transcript documents

Application Deadline 4/2/2026 6:00:59 PM Eastern Time Zone

Description About the [NASA Postdoctoral Program](#)

The [NASA Postdoctoral Program \(NPP\)](#) offers unique research opportunities to highly-talented scientists to engage in ongoing NASA research projects at a NASA Center, NASA Headquarters, or at a NASA-affiliated research institute. These one- to three-year fellowships are competitive and are designed to advance NASA's missions in space science, Earth science, aeronautics, space operations, exploration systems, and astrobiology.

Description:

An array of emerging quantum instruments uses laser-cooled atoms as precision sensors. The potential impact

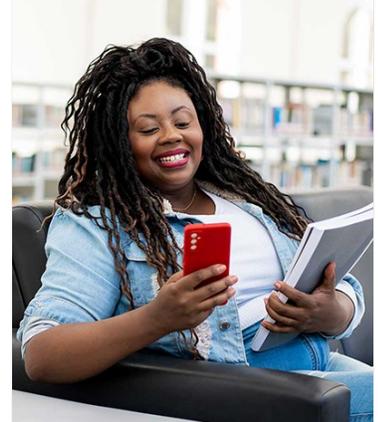

of these technologies, such as atom interferometer gravimeters and Rydberg-atom RF-electric probes can be greatly enhanced if cold-atom systems can be adapted from laboratory-scale experiments to compact, low-power field deployable probes.

Photonics and Quantum Sensors Group at Microdevices Laboratory of JPL, is accepting applications at the post doctoral level to design, fabricate, and characterize advanced semiconductor lasers and semiconductor optical amplifiers for quantum sensing applications. The quantum sensors under development require stable narrow linewidth single mode lasers and low current drive high saturation power optical amplifiers in the 600-850 nm wavelength range.

All semiconductor-based systems for atomic cooling experiments in space
M. Bagheri, J. Hunacek, E. Kittlaus, S. Chow, N. Yu and S. Forouhar (in preparation)

Semiconductor Optical Amplifier-based Laser System for Cold-Atom Sensors

Eric A. Kittlaus, Jonathan Hunacek, Mahmood Bagheri, Hani Nejadriahi,

Whether you are just starting your career or already at a senior level, ORAU offers internships, fellowships, research opportunities, and contract positions that can provide you with invaluable experience. Download the ORAU Pathfinder mobile app and find the right opportunity to propel you along your career path!

Applications with citizens from Designated Countries will not be accepted at this time, unless they are Legal Permanent Residents of the United States. A complete list of Designated Countries can be found at:

<https://www.nasa.gov/oiir/export-control>.

Eligibility is currently open to:

- U.S. Citizens;
- U.S. Lawful Permanent Residents (LPR);
- Foreign Nationals eligible for an Exchange Visitor J-1 visa status; and,
- Applicants for LPR, asylees, or refugees in the U.S. at the time of application with 1) a valid EAD card and 2) I-485 or I-589 forms in pending status

Questions about this opportunity? Please email npp@orau.org

Qualifications Experience fabricating GaAs lasers and amplifiers

Opportunity Title: Photonic devices for quantum sensors

Opportunity Reference Code: 0274-NPP-MAR26-JPL-TechDev

Point of Contact [Mikeala](#)

Eligibility Requirements • **Degree:** Doctoral Degree.
