

Opportunity Title: Space Science: Laboratory Studies of Cosmic Ices, Polycyclic Aromatic Hydrocarbons and Carbonaceous Molecules

Opportunity Reference Code: 0007-NPP-NOV26-ARC-Astrophys

Organization National Aeronautics and Space Administration (NASA)

Reference Code 0007-NPP-NOV26-ARC-Astrophys

How to Apply All applications must be submitted in [Zintellect](#)

Please visit the NASA Postdoctoral Program website for application instructions and requirements: [How to Apply | NASA Postdoctoral Program \(orau.org\)](#).

A complete application to the NASA Postdoctoral Program includes:

1. Research proposal
2. Three letters of recommendation
3. Official doctoral transcript documents

Application Deadline 11/1/2026 6:00:59 PM Eastern Time Zone

Description About the [NASA Postdoctoral Program](#)

The [NASA Postdoctoral Program \(NPP\)](#) offers unique research opportunities to highly-talented scientists to engage in ongoing NASA research projects at a NASA Center, NASA Headquarters, or at a NASA-affiliated research institute. These one- to three-year fellowships are competitive and are designed to advance NASA's missions in space science, Earth science, aeronautics, space operations, exploration systems, and astrobiology.

Description:

Major laboratory and theoretical research is under way to study the composition, and the physical and chemical properties of interstellar and planetary materials. Among the materials studied are interstellar polycyclic aromatic hydrocarbons (the largest molecules in space), aerosols and their gas phase molecular precursors in planetary atmospheres, ice mantles on interstellar grains and ice in comets and on solar system bodies. Cosmic and planetary material analogs (solid and gas phase) are produced in the laboratory under conditions realistically close to those expected in the interstellar and/or interplanetary medium (i.e., low [cryogenic] temperatures, high vacuum). Then, the materials are probed using current analytical techniques (e.g., spectroscopy in the ultraviolet to far-infrared range, Raman spectroscopy, time-of-flight mass spectrometry, gas chromatography). We are also studying the effects of interstellar and planetary processes (e.g., ultraviolet photolysis, high energy electron bombardment, and heating and cooling) on the structure and composition of these materials. Our goals are to provide quantitative information for interpreting observations from ground-, air-, and space-based observatories; to support the interpretation of data taken from extraterrestrial samples (cosmic dust, meteorites, and samples returned by spacecraft missions); to guide instrument development for future missions; and to help improve existing astrophysical and planetary models. This

Whether you are just starting your career or already at a senior level, ORAU offers internships, fellowships, research opportunities, and contract positions that can provide you with invaluable experience. Download the ORAU Pathfinder mobile app and find the right opportunity to propel you along your career path!

Applications with citizens from Designated Countries will not be accepted at this time, unless they are Legal Permanent Residents of the United States. A complete list of Designated Countries can be found at: <https://www.nasa.gov/oiir/export-control>.

Eligibility is currently open to:

- U.S. Citizens;
- U.S. Lawful Permanent Residents (LPR);

Opportunity Title: Space Science: Laboratory Studies of Cosmic Ices, Polycyclic Aromatic Hydrocarbons and Carbonaceous Molecules

Opportunity Reference Code: 0007-NPP-NOV26-ARC-Astrophys

- Foreign Nationals eligible for an Exchange Visitor J-1 visa status; and,
- Applicants for LPR, asylees, or refugees in the U.S. at the time of application with 1) a valid EAD card and 2) I-485 or I-589 forms in pending status
