

Opportunity Title: Investigating Mars' CO₂ Cycle and Seasonal Polar Caps Dynamics Using Radar Sounding

Opportunity Reference Code: 0312-NPP-NOV26-JPL-PlanetSci

Organization National Aeronautics and Space Administration (NASA)

Reference Code 0312-NPP-NOV26-JPL-PlanetSci

How to Apply All applications must be submitted in [Zintellect](#)

Please visit the NASA Postdoctoral Program website for application instructions and requirements: [How to Apply | NASA Postdoctoral Program \(orau.org\)](#).

A complete application to the NASA Postdoctoral Program includes:

1. Research proposal
2. Three letters of recommendation
3. Official doctoral transcript documents

Application Deadline 11/1/2026 6:00:59 PM Eastern Time Zone

Description About the [NASA Postdoctoral Program](#)

The [NASA Postdoctoral Program \(NPP\)](#) offers unique research opportunities to highly-talented scientists to engage in ongoing NASA research projects at a NASA Center, NASA Headquarters, or at a NASA-affiliated research institute. These one- to three-year fellowships are competitive and are designed to advance NASA's missions in space science, Earth science, aeronautics, space operations, exploration systems, and astrobiology.

Description:

Understanding the climate of Mars is essential for unraveling the planet's geological and atmospheric evolution, shedding light on its transformation from a warmer, wetter past to the cold, arid world observed today. This project focuses on characterizing the seasonal and long-term dynamics of Mars' CO₂ cycle and polar caps using radar sounding data, providing a critical perspective on processes governing the exchange of volatiles between surface and atmospheric reservoirs. The CO₂ cycle, a fundamental driver of Martian climate, influences atmospheric density, water stability, and dust activity, while the seasonal polar caps represent a key component of this exchange system. Utilizing radar data from instruments such as SHARAD aboard the Mars Reconnaissance Orbiter, this study will quantify the seasonal deposition and sublimation of CO₂ ice, revealing thickness and volume changes over time. These data will provide direct insights into the magnitude and variability of mass exchange between the surface and atmosphere, addressing critical knowledge gaps about the Martian volatile cycle. The analysis will extend to interannual and long-term variations, enabling the detection of potential secular trends in polar cap structure. By inferring radar-derived observables, this project will validate and refine measurements of CO₂ condensation and sublimation processes. By focusing on radar-sounding data, this project leverages a uniquely powerful but currently not fully exploited tool to investigate subsurface and

Whether you are just starting your career or already at a senior level, ORAU offers internships, fellowships, research opportunities, and contract positions that can provide you with invaluable experience. Download the ORAU Pathfinder mobile app and find the right opportunity to propel you along your career path!

Applications with citizens from Designated Countries will not be accepted at this time, unless they are Legal Permanent Residents of the United States. A complete list of Designated Countries can be found

at: <https://www.nasa.gov/oiir/export-control>.

Eligibility is currently open to:

- U.S. Citizens;
- U.S. Lawful Permanent Residents (LPR);
- Foreign Nationals eligible for an Exchange Visitor J-1 visa status; and,
- Applicants for LPR, asylees, or refugees in the U.S. at the time of application with 1) a valid EAD card and 2) I-485 or I-589 forms in pending status

Questions about this opportunity? Please email npp@orau.org

Qualifications Previous expertise working with radar sounding data
