

Opportunity Title: Heliophysics Science: Global Magnetospheric Simulation

Opportunity Reference Code: 0030-NPP-NOV26-GSFC-HelioSci

Organization National Aeronautics and Space Administration (NASA)

Reference Code 0030-NPP-NOV26-GSFC-HelioSci

How to Apply All applications must be submitted in [Zintellect](#)

Please visit the NASA Postdoctoral Program website for application instructions and requirements: [How to Apply | NASA Postdoctoral Program \(orau.org\)](#).

A complete application to the NASA Postdoctoral Program includes:

1. Research proposal
2. Three letters of recommendation
3. Official doctoral transcript documents

Application Deadline 11/1/2026 6:00:59 PM Eastern Time Zone

Description About the [NASA Postdoctoral Program](#)

The [NASA Postdoctoral Program \(NPP\)](#) offers unique research opportunities to highly-talented scientists to engage in ongoing NASA research projects at a NASA Center, NASA Headquarters, or at a NASA-affiliated research institute. These one- to three-year fellowships are competitive and are designed to advance NASA's missions in space science, Earth science, aeronautics, space operations, exploration systems, and astrobiology.

Description:

Current research focuses on developing the next generation of global simulations of the terrestrial magnetosphere and on intercalibrating existing simulation codes against themselves, data-based global models (e.g., those due to Tsyganenko), and against direct spacecraft observations. World-class research capabilities exist in all of these areas. A long-range objective is to develop global magnetosphere simulations, which allow for a quantitatively correct description of the terrestrial magnetosphere system. The presence of the SEC/LWS Programs at Goddard and their goal of understanding the global magnetosphere as a system provide a strong motivation for these research activities. The principal new techniques in global magnetohydrodynamics (MHD) code development include the construction of a finite element; a fully adaptive grid global MHD magnetospheric code, which will allow us to test the limits of MHD methods to modeling the global magnetosphere and on a longer timescale; and the use of hybrid and kinetic code patches to regions of the global MHD code where MHD is not applicable.

Whether you are just starting your career or already at a senior level, ORAU offers internships, fellowships, research opportunities, and contract positions that can provide you with invaluable experience. Download the ORAU Pathfinder mobile app and find the right opportunity to propel you along your career path!

Applications with citizens from Designated Countries will not be accepted at this time, unless they are Legal Permanent Residents of the United States. A complete list of Designated Countries can be found at: <https://www.nasa.gov/oiiir/export-control>.

Eligibility is currently open to:

- U.S. Citizens;
- U.S. Lawful Permanent Residents (LPR);
- Foreign Nationals eligible for an Exchange Visitor J-1 visa status; and,
- Applicants for LPR, asylees, or refugees in the U.S. at the time of application with 1) a valid EAD card and 2) I-485 or I-589 forms in pending status
