

Opportunity Title: FDA Fellowship in Regulatory Science Advancement for Continuous Glucose Monitoring (CGM) Endpoints

Opportunity Reference Code: FDA-CDER-2026-0181

Organization U.S. Food and Drug Administration (FDA)

Reference Code FDA-CDER-2026-0181

How to Apply *To submit your application, scroll to the bottom of this opportunity and click APPLY.*

A complete application consists of:

- An application
- Transcripts – [Click here for detailed information about acceptable transcripts](#)
- A current resume/CV, including academic history, employment history, relevant experiences, and publication list
- One educational or professional recommendation

All documents must be in English or include an official English translation.

If you have questions, send an email to ORISE.FDA.CDER@orau.org. Please include the reference code for this opportunity in your email.

Connect with ORISE...on the GO! Download the new ORISE GO mobile app in the [Apple App Store](#) or [Google Play Store](#) to help you stay engaged, connected, and informed during your ORISE experience and beyond!

Application Deadline 11/20/2026 3:00:00 PM Eastern Time Zone

Description ***Applications will be reviewed on a rolling-basis.**

FDA Office and Location: A research opportunity is available immediately with the Food and Drug Administration (FDA), located in Silver Spring, Maryland.

The Center for Drug Evaluation and Research (CDER) performs an essential public health task by making sure that safe and effective drugs are available to improve the health of people in the United States. As part of the U.S. Food and Drug Administration (FDA), CDER regulates over-the-counter and prescription drugs, including biological therapeutics and generic drugs. This effort covers more than just medicines.

Research Project: Under the guidance of a mentor, you will implement two-stage meta-analytic models and weighted least squares correlation methods to estimate the surrogacy strength of CGM-derived metrics (e.g., Time in Range (TIR)) relative to hemoglobin A1c (A1C) across multiple clinical trials, calculating and interpreting trial-level correlations across diverse study populations including adults with Type 1 and Type 2 diabetes and children with congenital hyperinsulinism, while integrating FDA-accumulated marketing application datasets with publicly available RCT data to conduct comprehensive, reproducible surrogacy analyses that identify and articulate discrepancies between CGM endpoints commonly used in clinical trials and the evidentiary standards required for regulatory marketing approval, and constructing simulation datasets grounded in real data characteristics to assess surrogacy under scenarios not fully represented in existing data.

ORISE GO

The ORISE GO mobile app helps you stay engaged, connected and informed during your ORISE experience – from application, to offer, through your appointment and even as an ORISE alum!

Opportunity Title: FDA Fellowship in Regulatory Science Advancement for Continuous Glucose Monitoring (CGM) Endpoints

Opportunity Reference Code: FDA-CDER-2026-0181

You will also have the opportunity to distinguish and formally model missing data mechanisms as they apply to CGM-specific intermittent and informative missingness patterns, design simulation studies to evaluate and benchmark existing and novel statistical approaches for handling complex, hierarchical CGM data under combined missingness and censoring scenarios, extend these methodologies beyond TIR to metrics with distinct distributional characteristics such as time above/below glycemic target ranges and glycemic variability measures, develop or adapt missing data methods for count-based or overdispersed discrete endpoints such as hypoglycemia event rates, and incorporate hierarchical and temporal dependencies introduced by CGM device characteristics and within-patient physiological variability into statistical models.

Additionally, you will participate in the creation, testing, and refining structured prompts using FDA's AI tool to automate routine CGM data cleaning, merging, and processing tasks, assess the impact of these standardized prompts on the speed, reproducibility, and consistency of regulatory data handling, demonstrate adherence to FDA data governance policies and applicable privacy regulations, and translate AI-assisted analytical outputs into clear, auditable documentation suitable for inclusion in regulatory review workflows.

Learning Objectives: By the end of this appointment, you will have developed the skillsets to:

- Articulate the regulatory framework governing the use of surrogate endpoints in drug development, including FDA standards for clinical meaningfulness and reliability.
- Integrate statistical, clinical, and regulatory perspectives to evaluate continuous glucose monitoring (CGM)-derived endpoints within the context of diabetes drug approval.

Mentor: The mentor for this opportunity is Yoonhee Kim (Yoonhee.kim@fda.hhs.gov). If you have questions about the nature of the research, please contact the mentor.

Anticipated Appointment Start Date: Early 2027. Start date is flexible and will depend on a variety of factors.

Appointment Length: The appointment will initially be for one year, but may be renewed for a second year upon recommendation of FDA and is contingent on the availability of funds.

Level of Participation: The appointment is full time.

Participant Stipend: The participant will receive a monthly stipend commensurate with educational level and experience.

Citizenship Requirements: This opportunity is available to U.S. citizens, Lawful Permanent Residents (LPR), and foreign nationals. Non-U.S. citizen applicants should refer to the [Guidelines for Non-U.S. Citizens Details page](#) of the program website for information about the valid immigration statuses that are acceptable for program participation.

This program, administered by ORAU through its contract with the U.S. Department of Energy to manage the Oak Ridge Institute for Science and Education, was established through an interagency agreement between DOE and FDA. The participant will receive a monthly stipend

Opportunity Title: FDA Fellowship in Regulatory Science Advancement for Continuous Glucose Monitoring (CGM) Endpoints

Opportunity Reference Code: FDA-CDER-2026-0181

commensurate with educational level and experience. Proof of health insurance is required for participation in this program. Participants do not become employees of FDA, DOE or the program administrator, and there are no employment-related benefits.

Completion of a successful background investigation by the Office of Personnel Management is required for an applicant to be on-boarded at FDA. OPM can complete a background investigation only for individuals, including non-US Citizens, who have resided in the US for a total of three of the past five years.

Qualifications The qualified candidate should be currently pursuing or have received a master's or doctoral degree in the one of the relevant fields.

Preferred Skills:

- Experience with surrogacy analyses using regression model and/or meta-analytic model including Bayesian methods and knowledge of continuous glucose monitoring data (or any digitally derived endpoint data)
- Programming experience using SAS and R for dealing with large amount of data and knowledge how to construct and execute simulation datasets grounded in real data
- Strong communication, presentation, and critical thinking skills with a mindset of enthusiastically learning new analyses and engaging effectively in a multidisciplinary team
